LET WATER FIND ITS *RHYTHM*

YOUR SHOWER, YOUR MOOD,
YOUR medley

In every drop, there is a story. In every flow, a mood. Medley by Jaquar is a celebration of this harmony, an ensemble of design, innovation, and indulgence. Designed for those who see their bath space as an extension of their lifestyle, Medley transforms water into an art form.

medley

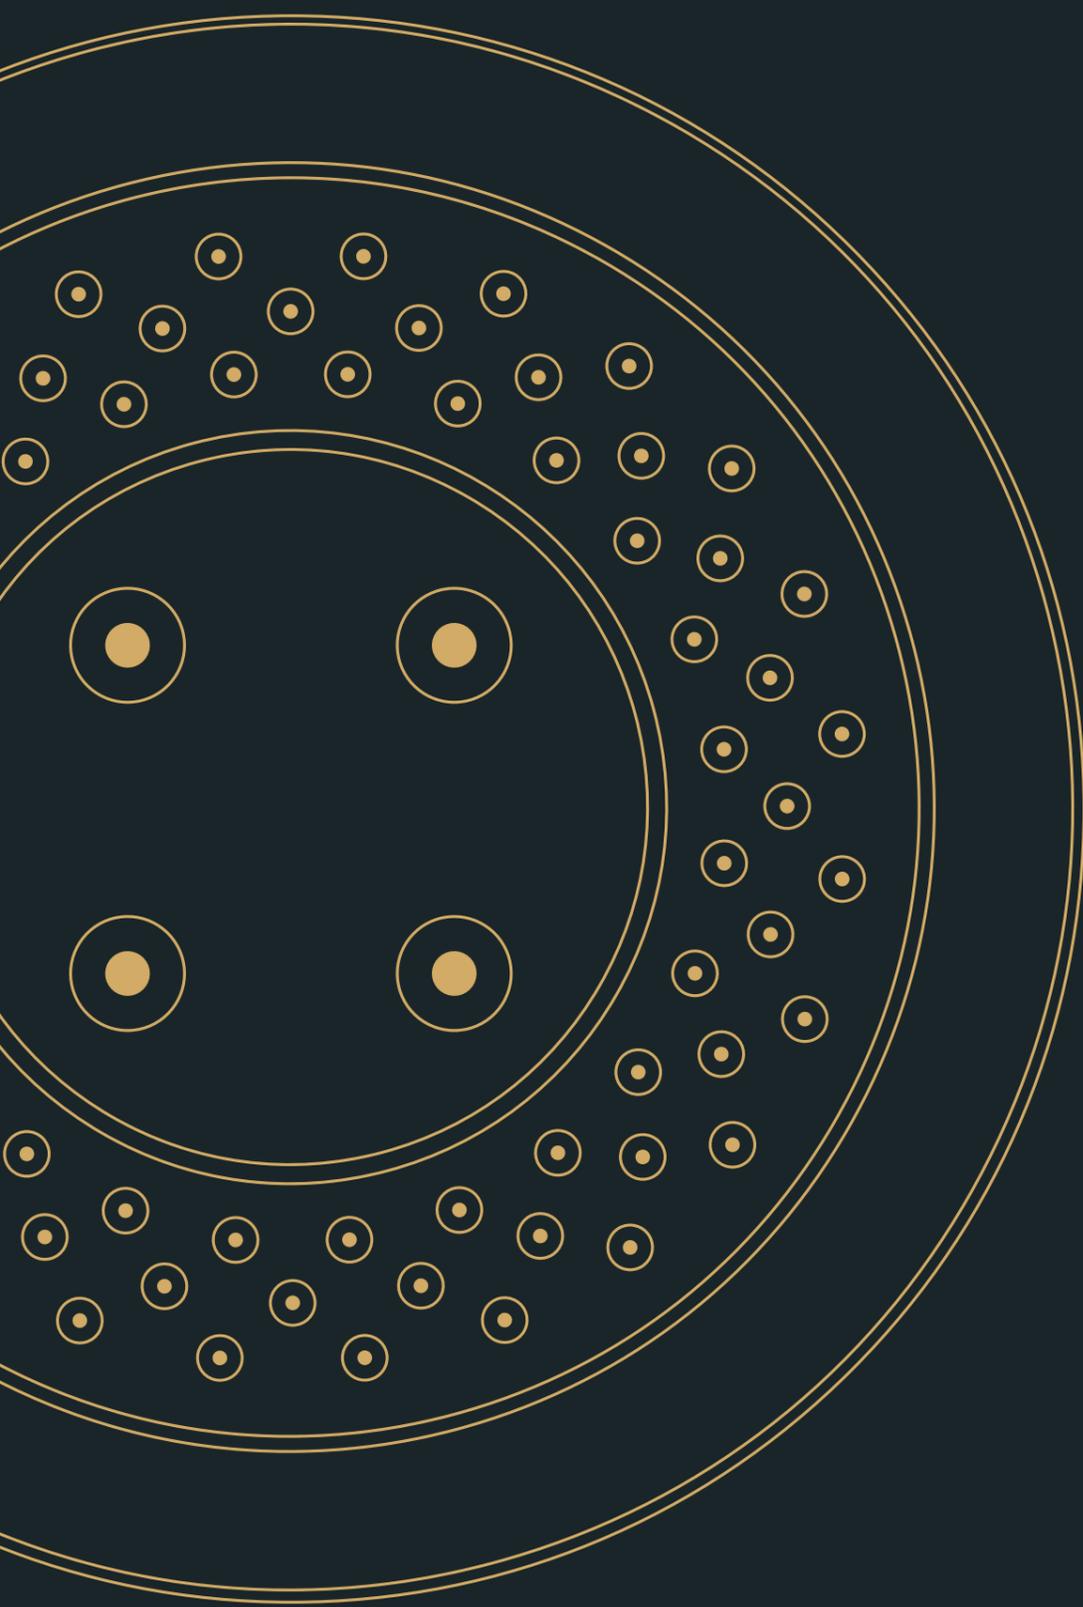

A SYMPHONY OF *FLAWS*

Just as a musical medley blends diverse notes into one harmonious composition, **Medley Showers** bring together multiple water experiences in perfect balance. Designed to complement every mood and preference, this collection celebrates variety while maintaining seamless elegance.

The range offers:

- **Dualflow Overhead Showers**
- **Triflow Hand Showers**

Each crafted to deliver distinctive showering experiences that flow together in harmony, creating your own symphony of indulgence.

THE DUALFLOW *OVERHEAD SHOWER*

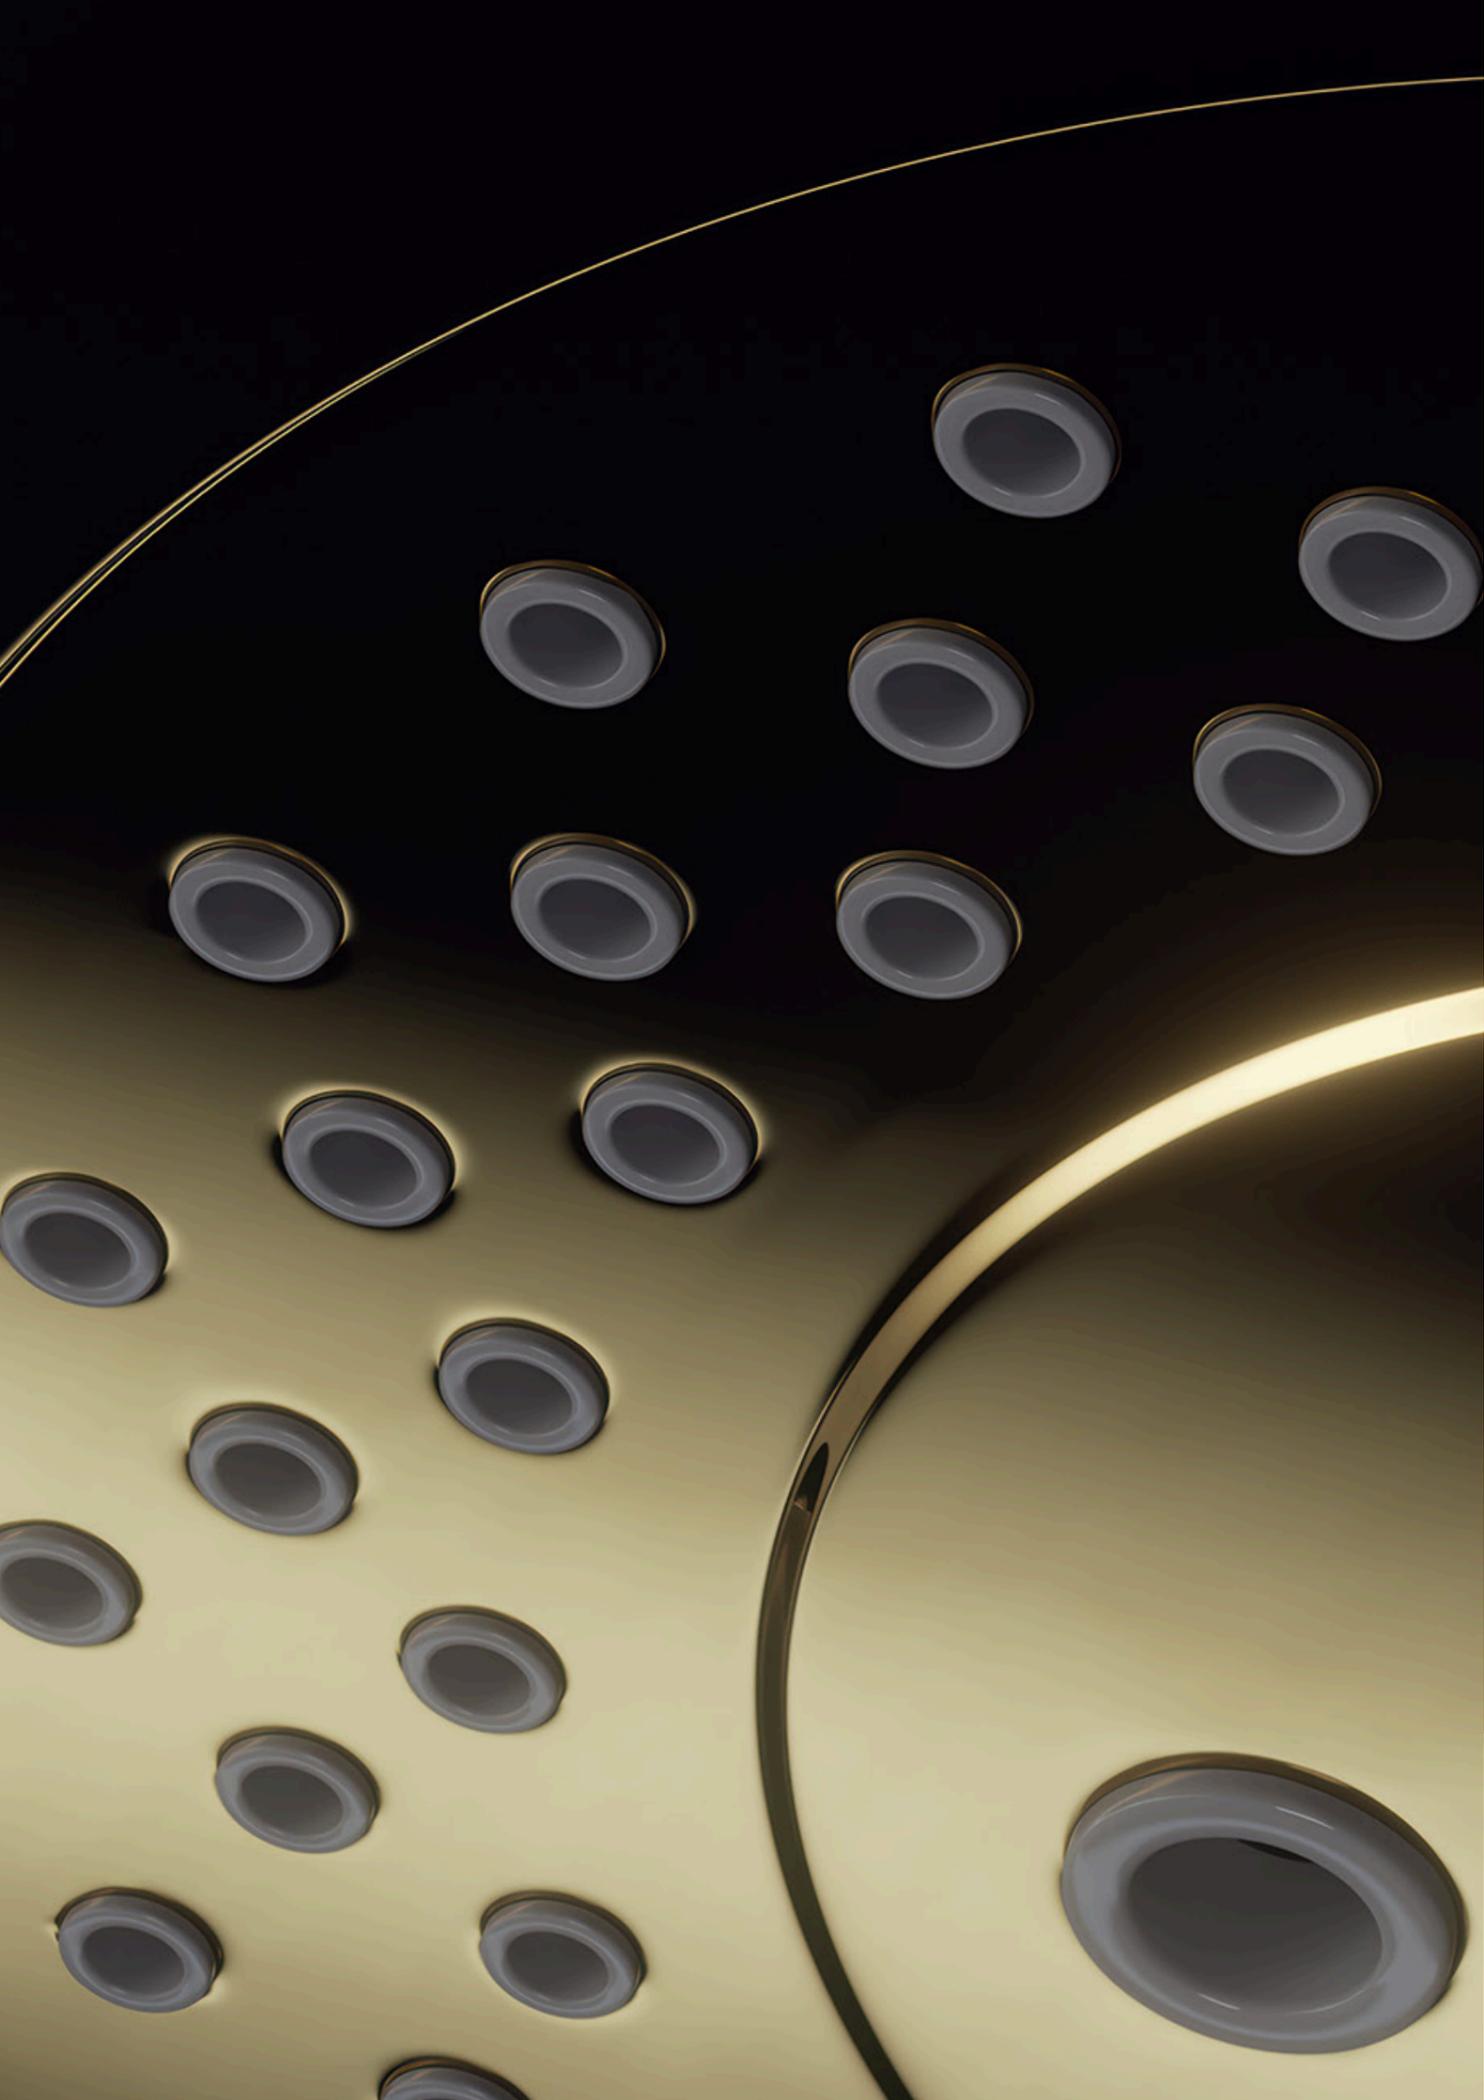

The Medley Dualflow Overhead Shower is designed to immerse you in indulgence. Its sleek, contemporary profile conceals two distinct worlds of experience: a patented Silk Spray that drapes you in soft, velvety droplets, and a Rain Spray that cascades with soothing fullness.

Silk

Rain

- **Effortless spray mode selection** - Switch between Rain and Silk sprays at the click of a button.
- **Easy-clean Rubit technology** - If you find limescale deposits inside or around the nozzles, simply rub your fingers across the jets to dislodge them and restore consistent water flow, and have a longer-lasting shower head.

SILK SPRAY

Silk Spray surrounds you in a delicate, caressing spray that soothes the senses and refreshes the body. As soft as silk against your skin, it evokes the gentle touch of summer rain, leaving you relaxed and rejuvenated.

RAIN SPRAY

Rain Spray offers a soothing, full-coverage spray that refreshes you. Designed for water efficiency, it ensures mindful use without compromise on comfort. With effortless switching between spray modes, you can personalize each shower to match your mood and preference, every single day.

Operating pressure: 1-5 bar (100 - 500 kPa) / (14.5 - 72.5 psi)

THE TRIFLOW *HAND SHOWER*

The Medley Triflow Hand Shower is a statement of design and flexibility, offering three spray modes to match your every mood: a Swirl Spray that energizes with spiralling streams, a Massage Spray that soothes tired muscles with invigorating jets, and a Gentle Rain Spray that surrounds you in calming drizzle. Ergonomically designed for comfort, with universal fit and easy-clean technology, it brings convenience and indulgence together.

SWIRL SPRAY

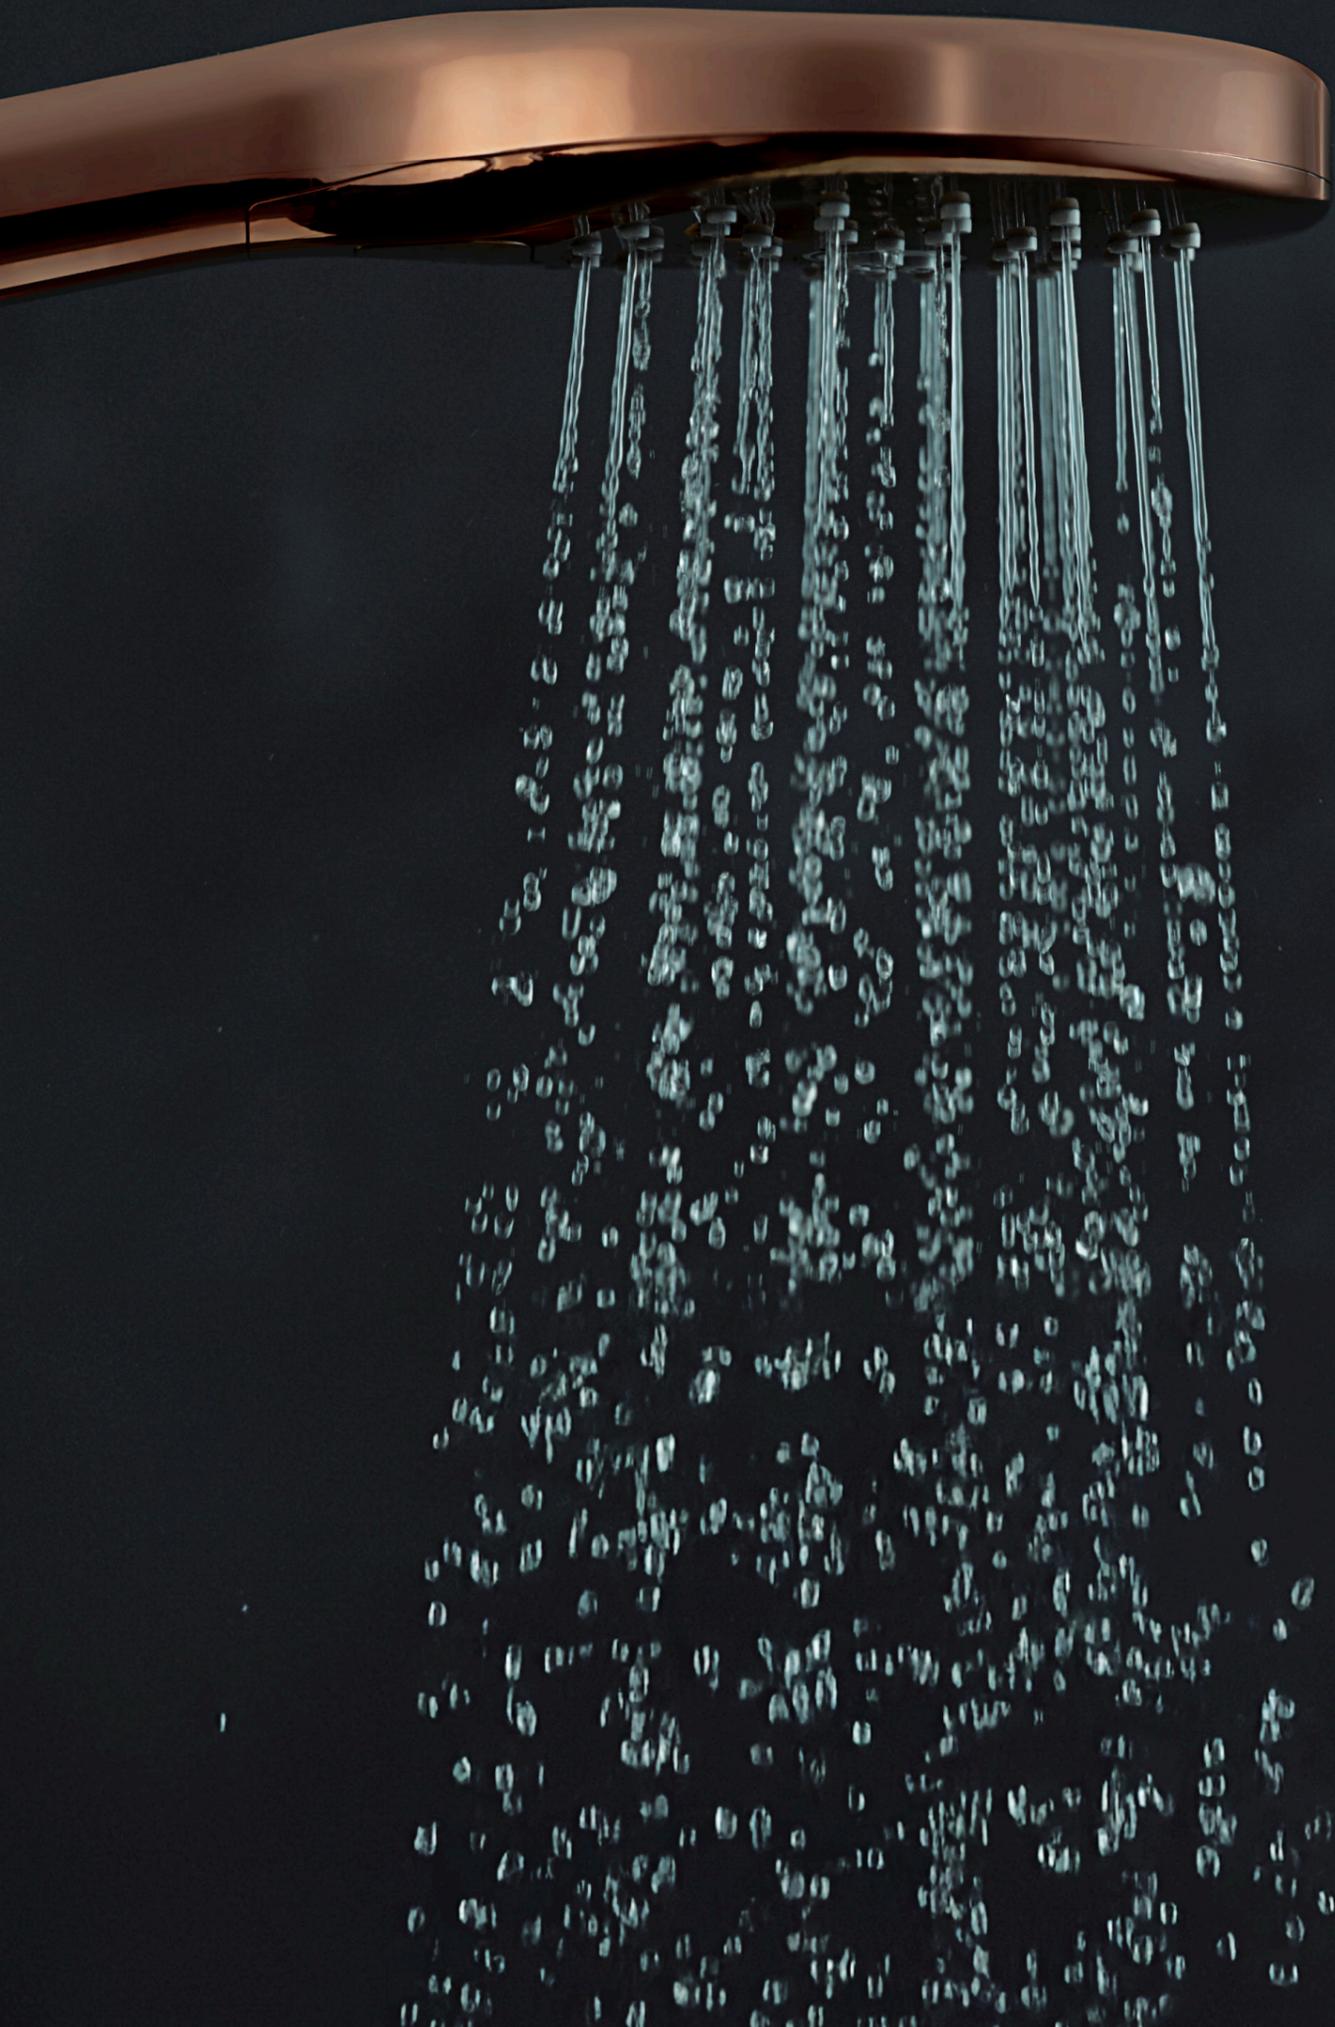

This unique spray creates a helical water pattern, combining relaxation and stimulation in perfect balance. Its spiraling spray gently massages the skin, eases muscle tension, and promotes healthy circulation.

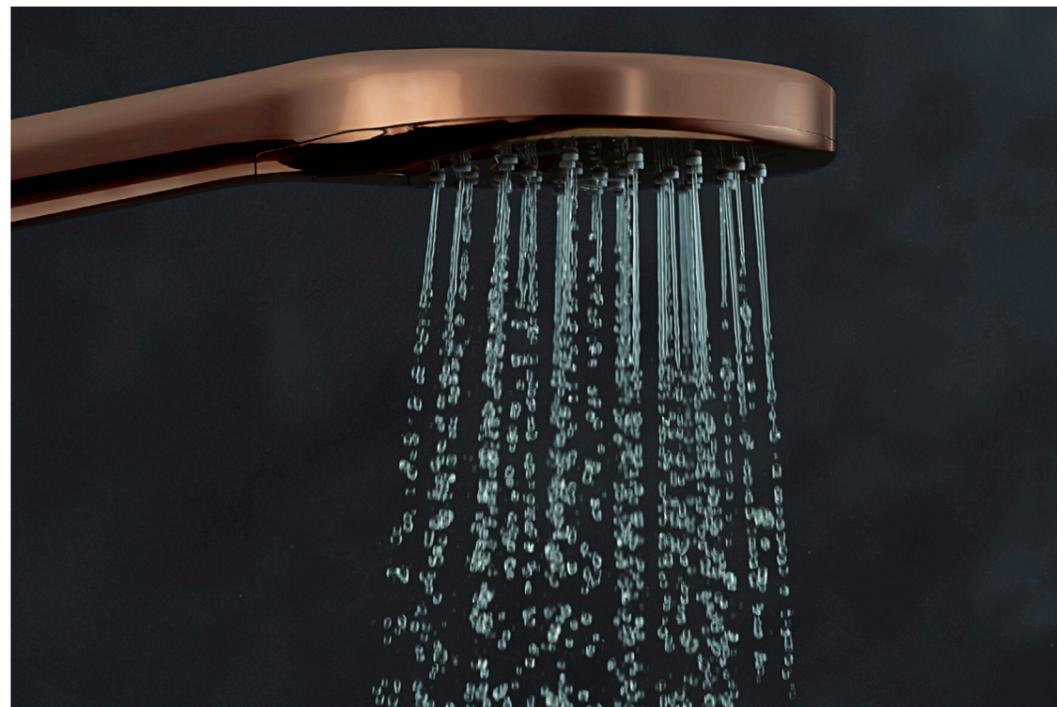

MASSAGE SPRAY

Massage Spray delivers a concentrated, invigorating flow which targets specific areas. This eases muscle fatigue and makes every shower not just refreshing, but also a deeply restorative experience.

RAIN SPRAY

The Rain mode provides a gentle, full-body coverage.

Operating pressure: 1-5 bar (100 - 500 kPa) / (14.5 - 72.5 psi)

Finishes that blend durability with design, giving your bath space a signature look.

SHOWERS
THAT MAKE YOU SING

A vertical waterfall flows from the top center of the frame down into a pool of water at the bottom. The water is bright white and blue, contrasting with the dark, shadowed rock walls of the cave. The pool of water at the bottom is a deep, dark blue. The overall atmosphere is mysterious and serene.

BEYOND BATHING.
INTO A WORLD OF INDULGENCE.

Step beneath Medley and watch your everyday dissolve into an experience. Water falls like silk, swirls with energy, and cascades with grace.

FAQS

1. Are Medley products suitable for instantaneous water heaters?

Yes, our products are suitable for modern electronic instantaneous water heaters. The only exception is our 6-litre Ecomcomfort system.

2. Is it possible to get a shower system with a hand shower other than the one it normally comes with?

We only offer the shower systems that are in your product range. However, you can order the hand showers.

3. Are shower heads also available in stainless steel?

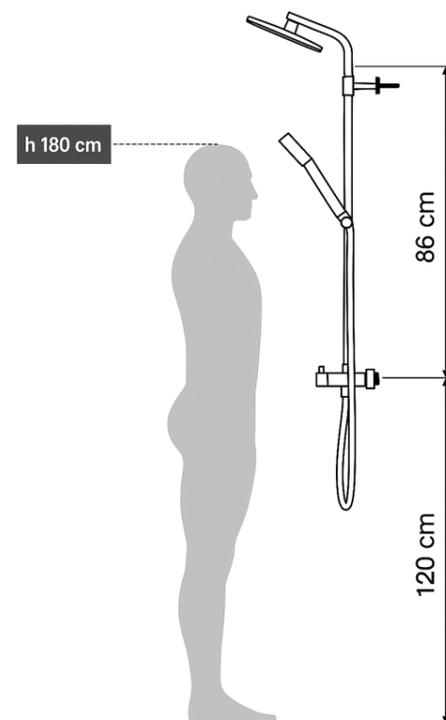

Yes, please contact us to know which models are available.

4. What can be done to prevent the shower head from dripping?

All shower heads empty themselves without this being controllable. This may occur due to a small air bubble in the nozzles or overpressure in the shower feed system (for example, a Pex piping system). Once cooled, the system returns to its original condition. This is common to all shower heads, regardless of model or manufacturer. We recommend positioning the shower head at a slope after use (all Medley by Jaquar shower heads are equipped with an articulated swivel joint) so that it empties within a few seconds.

5. What is the ideal height for mounting a shower system?

For detailed information about how to mount a shower system see the illustration below:

You can also ask us directly.

6. What is the minimum and maximum pressure requirement for shower heads and other products?

All shower heads work smoothly at a pressure of 1 - 5 BAR. You can see details on the specific flow diagrams.

7. Is it possible to shorten the shower head arm at will?

No, that is not possible or advisable.

8. Is customer service available?

Please contact us if you have any problems. It will be a pleasure to help you.

9. What is the difference between the standard shower head arm (available 30 cm or 45 cm) and the reinforced version?

The reinforced version can also be secured with two additional dowels and is equipped with a larger washer. It is designed to bear heavier loads.

In general, all our hand showers and shower heads are fitted with flow regulators of 6, 9, or 12 litres per minute. You can find this information in our catalogue for each specific product.

10. Is it possible to remove the flow regulator?

No, it isn't. If this happens, the guarantee would no longer be valid.

11. What pipe fittings do Medley by Jaquar products have?

All our products are equipped with ½-inch fittings and they work with a normal flow of 12-18 litres. Therefore, normal pipes are also suitable.

12. How are flexible hoses to be mounted in case of wall-mounted shower systems?

You have two different fittings: The rear one has to be connected to the tap through the short flexible hose (75cm). The front one has to be connected to the hand shower through the long hose (1.25m., 1.50m. or 1.75 m). If the hoses are not properly connected, there might be problems with the deviation. You will find more information by the pictures on our Web page or in the mounting instructions manual.

13. What are the built-in and wall-mounted shower systems called in our catalogue?

The built-in shower systems are always called System 1 (lower water connection) or system 5 (upper water connection). The wall-mounted systems are always called System 6.
